K-ROLL

Yokohama Arena - Yokohama, Japan

K-ROLL

GENERAL DESCRIPTION

K-Roll is a mobile system that allows the seats to be mobile without affecting their design and functionality.

The feet have a lever system with an integrated trigger which, activated by the foot, locks the wheels and fixes the seats to the floor without the need for any type of screw or fastening. With the wheels unlocked, it allows 360° movement of the set of seats.

ADVANTAGES

Based on the arrangement of groups of 4 or 5 seats on benches, these incorporate 2 self-supporting metal feet with retractable wheels, which allow 360° movement of the set, facilitating distribution changes.

K-Roll allows us to distribute the seats in the space according to the needs of each event, as the movement of the benches is carried out easily and without the need to use any additional mechanical element.

DIFFERENTIATIONS

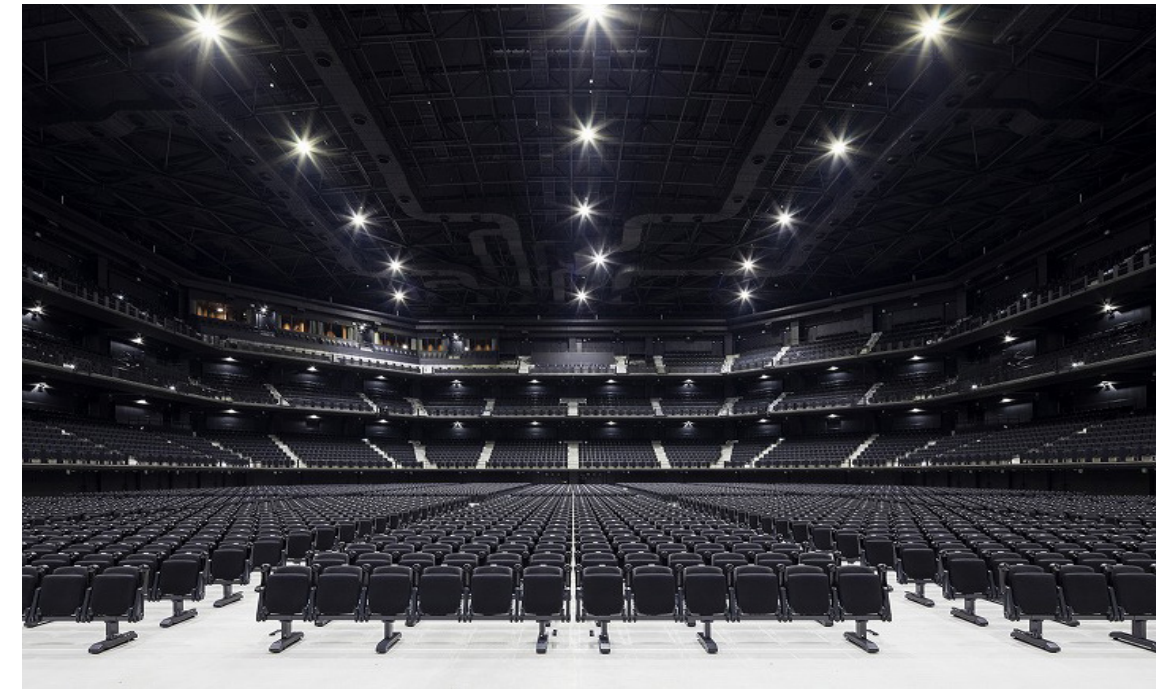

A simple lever system with a foot-operated trigger allows the wheels to be blocked so that the support plate rests completely on the floor, providing it with the stability and fixation necessary for its use, without the need for any type of screw or fastening.

This system allows the seats to be grouped together to form a compact block, minimising the space required for storage.

K-Roll is the perfect solution for multifunctional spaces with multipurpose uses.

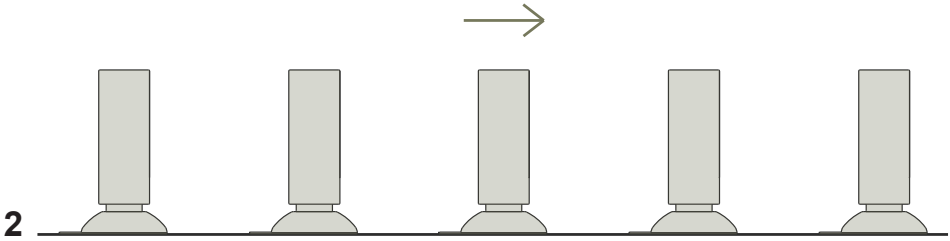

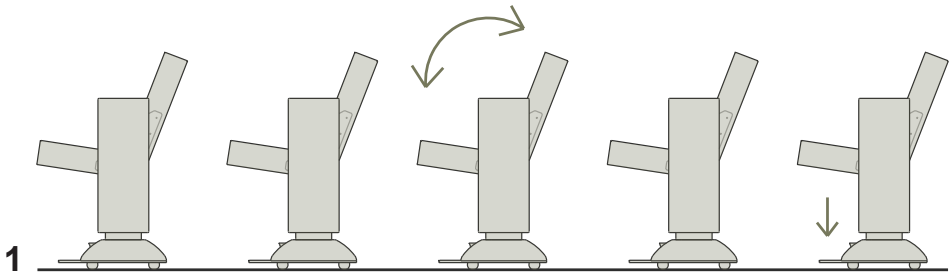

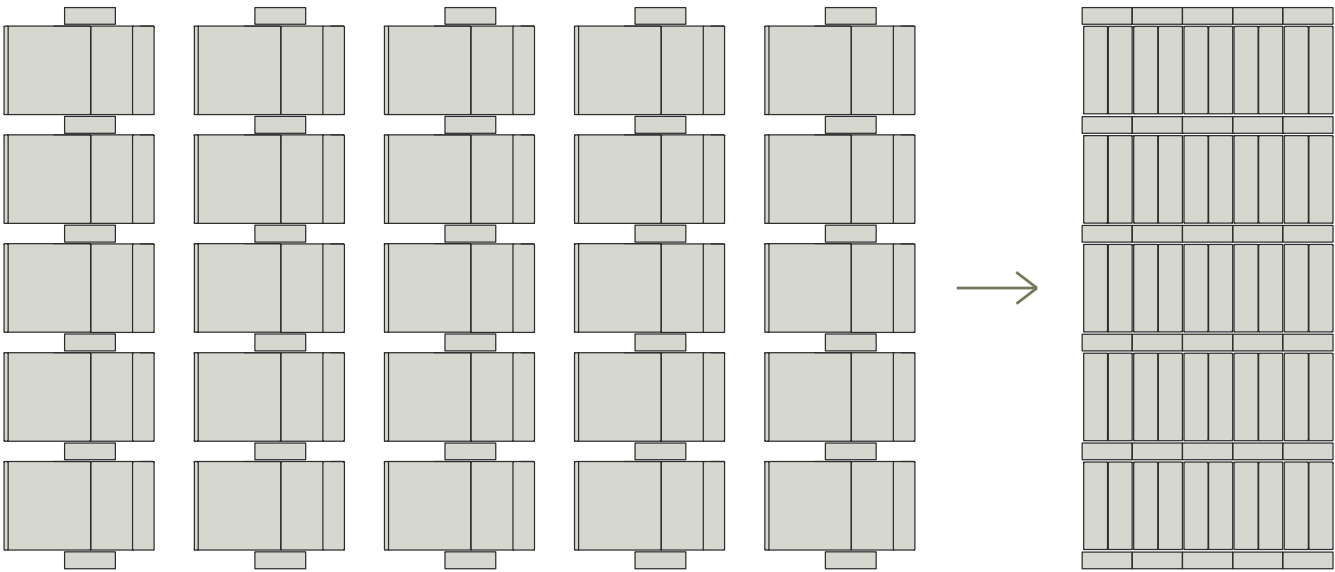

ECO-FRIENDLY (Lifetime)

To guarantee the closing of the materials cycle, each and every one of the elements used in its manufacture can be recycled separately, thus reducing the ecological footprint.
